

ARIADNA MALDONADO

WEB DEVELOPER

Bilingual Frontend Web Developer based in Buenos Aires. Passionate about creating intuitive and efficient web interfaces that adapt to various styles and needs. JavaScript, React, TypeScript, Next.js, Tailwind, Bootstrap, etc., are part of my growing repertoire of technologies that I have used to create high-quality web solutions. I participated in creating a responsive calendar component that helped small vendors significantly increase their sales and organize their services. I am looking for an opportunity to meet the needs of your company or clients.

WORK EXPERIENCE

Web Developer - Blogs

Easy Web Store

11/2023-Current

Development of different blogs for clients. Visually appealing and designed to match the clients' personality and aesthetic. Development is based on React and Bootstrap, with code repository and versioning on Git and Github, using WSL Ubuntu, and designed on Figma. Close collaboration with the client in identifying and defining project requirements, as well as jointly establishing the design, with several meetings for progress and adjustments.

Web Developer - Portfolio for Data Engineer

Argentina

08/2023-10/2023

Development of portfolio website for a Data Engineer. Development is based on Next.js and styled with Tailwind CSS, with code repository and versioning on Git and Github, using WSL Ubuntu, and designed on Figma. Website is deployed with Vercel. Close collaboration with the client in identifying and defining project requirements, as well as establishing the design, with several meetings for progress and adjustments.

Web Developer - Portfolio Website

Spain

04/2023-06/2023

Development of portfolio website for a graphic designer, with a focus on professional use and visually appealing, with a "Mobile First" approach to ensure an optimal user experience on all devices, always considering accessibility, usability, and scalability. Development is based on HTML, CSS, and Javascript as per the client's request, with code repository and versioning on Git and Github, using WSL Ubuntu, and designed on Figma. Close collaboration with the client in identifying and defining project requirements, as well as jointly establishing the design, with several meetings for progress and adjustments.

Jr Frontend Web Developer

Ágora

01/2022-01/2023

Development and maintenance of a web application designed to provide tools for professionals to offer their services and events from a unified platform. Collaboration with designers through Figma to bring designs to life. Usage of React and Typescript to build reusable UI components throughout the platform. Application of Styled-Components and later transitioning to Tailwind for styles and formatting with ESLint and Prettier. Version control managed through Git, with the use of WSL Ubuntu terminal. Employment of Jira for task management (Kanban methodology).
